

CNMT 210 Week 10 Print Styles Assignment  
Points: 10  
Due Date: 11/5/2015 12:00pm Central time

This assignment will build on the Week 9 Responsive Web Design assignment to add an appropriate print version. Begin with your HTML and CSS from the Responsive Web Design assignment and modify it for this assignment. **The print version should not contain the aside or any of the nav elements.**

The HTML and CSS can be modified for this exercise but you should not need to change the HTML beyond adding the <link> to your print stylesheet and there should be no other changes in the given CSS. Rather than an embedded media query within your existing stylesheet, the print styles should be captured in a stylesheet containing the bare minimum styles applicable to meet the requirement (I did this in 3 style rules).

Graded according to this scale:

- (2 points) - A separate stylesheet applied just for print that contains the bare minimum styles appropriate to meet the requirements.
- (3 points) - Navigation and aside elements don't appear on printed version but other elements do and use the maximum space appropriately.
- (1 point) - Use of external stylesheets containing all styles in a styles folder and use of a locally stored shiv JavaScript file in a js folder.
- (1 point) - All files and folders named appropriately for web use.
- (1 point) - Screenshot of Print Preview showing the correct elements.
- (1 point) - Screenshots of Firefox in desktop, 320x480, and 768x1024 modes with Responsive Design View.
- (1 point) - Single zip file containing all elements or demonstrated assignment completion in lab.
