

### Troubleshooting JavaScript Checklist

- ☐ Validate the HTML using the W3C Validator. You'd be surprised at how many problems can be solved with just this step.
- ☐ Use the Firebug Console. Reload the page and look for errors. JavaScript is case sensitive.
- ☐ Validate the CSS using the W3C CSS Validator. The CSS may not be the problem, so this step yields diminishing returns.
- ☐ Start commenting things out of the JavaScript. Get back to just the basic/minimum.
- ☐ Try adding just `alert('hi');` to the top of the JavaScript to see if it's getting that far. Move the alert down until it no longer appears.
